DETAILED ACTION

Claim Objections

1. Claims 6-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Uemura *et al.* (US 2003/0197866 A1).

With respect to claim 1, Uemura discloses: An inspection device for inspecting an object passing on a conveyance path (21), comprising: an illumination portion for illuminating the object with light in a plurality of wavelength bands (paragraph [0026]); at least one light-receiving and detecting element for receiving light generated from the object; and a discrimination processing portion (controller, paragraph [0039]) for discriminating the object by combining data of a plurality of detection signals obtained by the light-receiving and detecting element which receives the light generated from the object substantially within an identical period of time when the illuminating portion

illuminates the object with the light in the plurality of wavelength bands (Uemura discloses no time delay and computations are done with electronics and are effectively instantaneous; paragraph [0039]); and by comparing and collating combined data with preset reference data (Step S20, Fig. 2).

With respect to claim 3, Uemura teaches a controller for controlling a plurality of light sources for emitting beams in different wavelength bands (paragraph [0027]).

With respect to claim 4, Uemura teaches the use of a plurality of light detection elements (see claim 6).

With respect to claim 5, Uemura teaches optical filters for transmitting only certain light components (24).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Uemura.

With respect to claim 2, Uemura does not specifically teach a ratio of a plurality of detected values obtained by the detection element. However, Uemura teaches ratios of each detected light with corresponding illumination intensities (paragraphs [0033]-[0037]). Further, Uemura teaches using these results to obtain an "evaluation value" (paragraph [0036]), though not specifically a ratio. It

would have been obvious to one of ordinary skill in the art at the time the invention was made to manipulate the data in any desired fashion, depending on the format of the reference data to which the result is compared (such as that of Uemura, paragraph [0041]).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
